Fill the glass with water to make it happy the setting of the game is very simple: there is a glass of water that is sad and empty on screen and we need to fill it to make it happy. The point is that the water flow does not reach the container directly and that is where we need to use logic. We will do this by drawing a line on the screen that will cause water to fall into the glass. Since this is unlikely the first game of its kind you see, you already know that the lines you draw are subject to gravity, so you need to make sure you find the right footy to achieve your goals. This is a key feature you'll find in this puzzle game: lines draw on the screen in total freedom: everything you want and wherever you want. Progressive difficulty games: get harder as you progress. Many levels increase as new updates arrive. If you like logical hobbies, don't think twice and download APK Happy Glass now.
